Nutrition Tips

Nutrition Tips

Rest is key. Your body needs 8-9 hours a night to repair and rebuild

Protein: Aim for 1.2–2.0g per kg of body weight daily using complete sources like chicken breast, eggs, fish, and tofu.

Carbohydrates: Get roughly 50% of your daily calories from complex carbs like oats, brown rice, and sweet potatoes to store muscle glycogen for workout energy.

Fats: Dedicate 20% to 35% of your calories to heart-healthy fats from olive oil, avocados, nuts, and salmon to support hormone production.

Meal Timing and Consistency

- **Eating Frequency:** Fuel your body by eating a balanced meal or snack every 3 to 4 hours.
- **Post-Workout Refuel:** Consume 20 to 40 grams of protein and some carbohydrates within an hour after exercising to maximize muscle repair and replenish glycogen stores.
